

CBRC Annual Meeting Minutes
Santa Barbara, CA 14-15 January 2011

14 JAN 2011

Meeting called to order at 1:45pm, 14 January 2011 (Chair presiding). Members Paul Lehman (Chair), Dan Singer (Vice-Chair), Guy McCaskie (non-voting Secretary), Dave Compton, Jon Dunn, Kimball Garrett, Oscar Johnson, Joseph Morlan, Brian Sullivan, and Jim Tietz present.

Welcome and introductory remarks by Lehman.

2010 Minutes. No approval needed; approved in March 2010.

- 1. Election of Members:** Prior to discussion of nominees and potential new members, discussion was held on the requirements members must meet in order to make nominations. Per the Bylaws, nominations must be made in writing to the Chair at least thirty days prior to the Annual Meeting.
 - a.** Election. The terms of Dunn, Sullivan and Tietz expire. Kristie Nelson, Jim Pike, Scott Terrill elected.
 - b.** Discussion of Future Members: An extensive review of potential future members generated a lengthy discussion.
- 2. Election of the Secretary** (one year term) – nomination: Guy McCaskie (Lehman). Elected 9-0.
- 3. Election of Chair** (one year term) – nomination: Paul Lehman (Singer). Elected 8-0.
- 4. Election of Vice-Chair** (one year term) – nomination: Dan Singer (Lehman). Elected 8-0.
- 5. Procedural issues:**
 - a.** ADDRESS CHANGE – Routing forms in your possession should be updated by you if a change of address is submitted by another member or you receive word from the Chair, Vice-Chair or Secretary of such a change. Address changes can be sent to the Chair and Vice-Chair or to the entire committee.
 - b.** SCHEDULE CHANGE - Send schedule changes to the Chair and Vice-Chair or the entire committee as soon as possible. The general rule is if you are going to be gone for two or more weeks, batches should be routed around you.
 - c.** NAMING VOTE FILES - Vote files should always include either your initials or your last name in the file name, for example “**10G votes KLG**” or “**10G votes Singer**”. This enables the secretary to readily determine who has voted on a particular batch.
 - d.** RETURNING BIRD COMMENTS – Continuing confusion regarding when and how to comment on the Secretary's solicitation of opinions on returning bird issues led to clarification in how votes will be tabulated as they relate to returning bird concerns. If the Batch Record Sheet contains a *statement* from the Secretary that “record X” is a returning

bird, i.e. “record X is the same bird as record B from a prior period”, then the default assumption will be that any lack of comment or a “no opinion” from voting members means they are endorsing the Secretary's statement that “record X is the same bird as record B”. It is up to a voting member to comment if they disagree with the returning bird statement. However, if the Secretary asks the *question* “is record X the same bird as record B?” then a voting member's lack of comment or “no opinion” shall mean “record X *is not* the same bird as record B”. It is up to a voting member to comment if they believe the record does pertain to a returning bird. A majority vote is required for a “same bird” or “returning bird” question to pass. If the vote is split between those in favor and those opposed the Secretary will bring it to the Committee's attention. At this point it will become the voting member's responsibility to request the record be brought to a meeting for further discussion after which the issue will be voted on at the meeting. These records will only be brought to a meeting upon a member's request. Without this request, the vote to determine “returning bird” status will stand as determined during the record's previous circulation.

e. DATE SPANS – Members agreed that some latitude was necessary in determining the last date of a record and that formal documentation was not necessarily required.

f. VOTING SUMMARY FORMS – If you use a tabular summary form for accept votes with no comment, be careful that the columns line up appropriately.

g. RARE BIRDS OF CALIFORNIA CORRIGENDA – Corrections should be submitted to the Secretary. The webmaster will only accept corrections from the Secretary, Chair or the Vice-Chair.

6. Operating expenses: Secretary listed annual expenses of \$143.00 for a Post Office box and a shipping charge for a box of checklists. Other expenses such as batch postage are absorbed by members.

7. Committee responsibilities: Discussion was held involving the CBRC's responsibility as a subcommittee of Western Field Ornithologists. Members agreed that a presentation of some kind be made at the annual WFO meetings and that it is incumbent upon members attending the meeting to volunteer to make a presentation. The discussion also touched upon the Committee's special relationship with its parent organization, WFO, with one member suggesting contributions can be made toward the publication of reports on the WFO website. Other members suggested making an acknowledgment of appreciation by the Committee towards WFO for its support and a consensus emerged that this along with a low-key request for contributions be incorporated into Committee presentations at WFO conference. Members were encouraged to attend all WFO conferences, but especially those in California.

8. Northern offshore boundary of CA (and OR): Lehman reminded the Committee that the Bylaws state the 42nd parallel is the northern offshore border between California and Oregon, and the fact that the nearest point of land might be in Oregon doesn't matter as long as the record is south of the 42nd parallel.

Measuring distance from seabird coordinates to nearest point of land with Google Earth: Tietz expressed concern that significant distance differences can be obtained

when using Google Earth to measure the nearest point of land and lead to questions of its accuracy. After discussion a consensus emerged that the Google Earth system was probably not at fault and that for most of the Committee's purposes it was sufficient. However, concern was sufficient and it was agreed that this situation should be monitored on a continuing basis. Sullivan volunteered to use the Oracle spatial lookup system used by eBird in cases where precise measurements are important.

10. Use of metric system for offshore measurements: Pyle moved and Tietz seconded that the Committee use kilometers instead of nautical miles as a unit of measure for all offshore records when such information is required in Annual Reports or on the online CBRC book update pages. The Committee unanimously agreed with this recommendation and further agreed to use the metric system for land-based records if such measurements are part of an Annual Report or a book update.

11. Phenotypically mostly-species versus hybrid and rejection and consistency of voting: Difficulties with how to treat birds showing a minimal amount of hybrid characters such as some Blue-winged/Golden-winged Warblers or Elegant/Sandwich Terns led Pyle to propose the Committee define a level of purity with which we are willing to accept birds as pure even though some of them include a small proportion of another species's genes, and used American and Black Oystercatcher as an example. He further proposed that the "purity line" be set at 7/8s (87.5%), such that we consider birds 7/8s and higher as pure. As an example, a F3 Blue-winged with Blue-winged ancestors except for one Golden-winged great grandparent would be an acceptable Blue-winged, leaving our definition of hybrids as more obvious examples, typically F1s or F2s. Though this proposal generated much discussion, it gained little momentum, as most members felt defining genotypes by evaluating phenotypes, which is the only data at our disposal, was not possible or, at least, beyond the abilities of the Committee.

12. Bar-tailed Godwit subspecies: A recent paper by P. Tomkovich published by the BOC in which he recognizes the validity of the taxon *anadyrensis* led to Dunn proposing that Tomkovich's opinion be sought on some California records in hopes it might provide more information on the origin of some Bar-tailed Godwits in California. Members agreed and Dunn will seek Tomkovich's interest in reviewing records and make arrangements for copies of adequately documented records to be sent to him.

13. CBRC and eBird: Garrett sought clarification on how CBRC review species are handled by eBird editors. Sullivan reviewed current eBird policy: eBird follows all Bird Records Committee decisions. County eBird editors are encouraged to validate review species records if the identification is straightforward and good documentation exists, but more difficult records should be left as invalid until CBRC review is complete. Once a final decision is made by the Committee, it is the eBird editor's responsibility to ensure these records of review species follow Committee decisions.

14. Introduced Birds Sub-committee Report: Garrett led a discussion on the current status of Nutmeg Mannikin in California and sought direction concerning the pros and cons of producing a listing package for review by the Committee. Members voted 8-1 in

favor of proceeding with the development of a listing package based on an apparent increasing population and rampant breeding during much of the year in Southern California. Additional introduced species were discussed that might eventually deserve consideration for the state list but no further action was taken. The removal of extirpated introduced species from the State List was debated and the Introduced Birds Subcommittee was charged with reviewing various options and presenting it at the 2012 meeting. Options included: 1. Leave species on the list with an appropriate designation (e.g. “IE” for Introduced, Extirpated) 2. Remove species from the list and 3. move species to an appendix or supplement list.

15. Past changes to Review List: Two recent additions to the Review List, Magnificent Frigatebird in 2009 and Elf Owl in 2010, were added without the appropriate number of votes required by the Bylaws. In the case of Magnificent Frigatebird, a member absence created the discrepancy; the re-vote was 9-0 in favor of adding/retaining this species on the Review List. With the Elf Owl, the 2010 vote to add the species to the Review List was unanimous, but the review start date was not finalized as the Committee voted 6-3 to consider reviewing records retroactively to the 1980s pending further research. The re-vote for retaining the species on the Review List was 9-0 in favor. The vote to review records retroactively was 1-8 so the review start date remains 1 January 2010.

16. Proposed Bylaw changes: Under Section VI.B(2), Records Treated, the Bylaws state that generally species that have occurred four or few times per year will be treated, but Committee publications such as checklists, the CBRC book and the website also include the language “and have occurred 100 or fewer times”. The Committee recognized these are guidelines only and there was not significant interest in changing the Bylaws. The proposal was withdrawn. A review of how records and individual birds are tabulated led to a discussion of the ambiguous language in the CBRC book and on the CBRC website involving this issue. Compton volunteered to review the problem, consult with Morlan and McCaskie, and report back to the Committee with a recommendation on clarifying language and incorporating it into the Bylaws.

17. Proposed Review List changes:

Additions (see Appendices A, B, C, D) -

a. Fulvous Whistling-Duck – Johnson presented an analysis of records from the past ten years which showed this species has occurred at a rate of 1.9 birds per year. *A motion by Dunn (seconded by Compton) to add to the review list passed 9-0. A Dunn motion (seconded by Singer) to set the review period start date as 1 January 2005 failed 1-8, therefore the review start date will be 1 January 2011.*

b. Tufted Duck – Singer presented data from the previous ten-year period, which showed 120 records during this span, well above the four per year threshold. No motion to add but members agreed it should be monitored in light of waterfowl population decreases in Asia.

c. Cape May Warbler – Dunn presented results of his research. From approximately 1968 until 1980 there were 121 records; from 1980-1995 there were 88 records; from 1996-2009 there were 41 records. The downward trend is obvious. The period from 2000-2009 there was an average of 3.3 records per year. *A motion by Dunn to add the species to the*

review list was seconded by Morlan and passed 9-0. Records from 1 January 2011 forward will be reviewed.

d. Bay-breasted Warbler – Dunn presented results of his research which illustrated a significant decline in records for this species during the past fifteen years. Prior to 1980 there were 127 records; from 1981-1995 there were 128 records; from 1996-2009 there were 70 records. An average of 5.6 records per year during the most recent ten-year period exceeds the four per year threshold. No motion was made to add this species to the Review List.

Potential future additions -

e. Gilded Flicker – The status of this declining species was discussed, though no data were available at the meeting, precluding any motion to add this taxon to the review list. There was widespread agreement that the situation needs monitoring and the species may deserve review list status in the future. Currently the only area this species is encountered with any regularity is the Cima Dome, where a small breeding population appears to persist. Reports from the Colorado River are likely suspect. Sullivan advocated the idea of using eBird to track records and suggested a “Gilded Flicker survey” be promoted via eBird to get people in the field to search areas where this species might be encountered.

f. Craveri’s Murrelet – Sullivan questioned the status of this species and further discussion revealed other member’s concern regarding ID problems and anomalous reports off Central and Northern California when none are being reported off northern Baja or Southern California. Pelagic coverage has increased dramatically in recent years off Southern California, as has the use of digital cameras, but good documentation for most reports of Craveri’s Murrelet is lacking. All agreed this species needs monitoring and Sullivan and Garrett agreed to make an appeal for good documentation on Calbirds and eBird so the species status can be better assessed.

Removals (see Appendices H, I, J, K) –

g. Yellow-crowned Night-Heron – Johnson proposed removal and cited recent breeding in San Diego County and also last year in Ventura County at Pt. Mugu. As a general rule the Committee has not endorsed adding rare breeding species to the review list so having a species on the review list that has only recently begun breeding with some regularity presents unresolved complications. Overall occurrence rate at 3.8 individuals per year is just below our “more than four per year” threshold but the rate drops notably when each nest of multiple young are counted as one record. How many (if any) of the more current records might represent birds fledged from local nests of breeding pairs (perhaps three or four) is unknown. The number of statewide occurrences is still very low and caution was advised because such a new and tiny breeding population could disappear quickly.

Johnson motion to remove from review list failed 3-6.

h. Crested Caracara – Morlan reviewed records in the database from the past ten years and came up with 40 records, of which twelve were considered by the Committee to involve returning or same birds. The 2.8 average is well below the less than four per year threshold. No motion was made to remove this species from the Review List.

i. Lesser Black-backed Gull – Johnson reviewed records in the database and estimated we are averaging approximately 5.5 per year. While this is over the less than four per year threshold, a spike in records during 2007 with a preponderance of records from Imperial

and Riverside account for much of this increase. This, combined with a high rejection rate, identification difficulty, questions of which subspecies might be involved in California records, and the total number of accepted records still well-below 100, led to the withdraw of the motion to remove this species from the Review List.

j. Pine Warbler – Morlan reviewed records and determined there were 42 records during the past ten years, five of which were returning birds, for an average of 3.7 records per year. Total number of accepted records is slightly under 100. Members noted a spike in frequency during 2006-2008, identification difficulty, and the scarcity of this species in Central and Northern California as additional reasons to not remove it from the Review List. No motion to remove was made.

k. Yellow-throated Warbler – Morlan reviewed records and found 40 records accepted over the past ten years with a total of 130 accepted records. Proponents for removal argued the identification was straightforward, there was a sufficient number of accepted records, and keeping it on the Review List wasn't contributing to our collective knowledge. Morlan made a motion for removal (seconded by??) with a vote of 6-3 in favor, so the motion failed.

18. Records for which the Secretary needs guidance:

a. Harris's Hawk – a report of one from Hastings Reservation in Monterey County was received from Michael Patten. The actual observer, a graduate student of Patten's who spent several months at Hastings, gave him a verbal description which he in turn paraphrased and sent to the Secretary. The Committee expressed no interest in reviewing the record.

b. Connecticut Warbler 2007-040 – Observer requested this rejected record be reconsidered based on additional information submitted in a note to the Committee. Members agreed it was not possible to adequately evaluate this material without having the original record with member comments available for review. The Committee voted 5-4 to have the record brought to the 2012 meeting and evaluated at that time. Sullivan agreed to contact the observer and provide a status update.

c. Scarlet Tanager 1994-122 – A date extension was submitted by Ed Pandolfino who saw this bird on 9 August 1994, beyond the accepted date range of 13-31 July 1994. Approved 9-0.

d. Demoiselle Crane 2001-173 – The leader of a Brookline Bird Club field trip, Bill Drummond, submitted evidence that this bird was seen by all participants of the trip on a date day beyond the accepted date range of 30 Sep 2001-18 Feb 2002. The documentation wasn't available at the meeting but the Committee approved the date extension by a vote of 9-0. The Chair will confirm the date extension and inform members via email.

19. Records brought to the meeting at the request of a member:

a. 2009-122 and 2010-014 (Trumpeter Swans at Auburn Regional Park, PLA) – 2009-122 is an accepted record of an immature swan present in early April 2009. 2010-014 involves two adults present in February and March 2010 and after one circulation the vote was split with four members rejecting based on questionable natural occurrence and six members considering one of these birds the same as 2009-122. A concern over natural occurrence for 2009-122 arose after the record was accepted and word filtered down to

the local birding community, many of whom felt strongly the bird was an escapee based on exceedingly tame behavior. After reviewing correspondence from several local observers familiar with the situation, the Committee voted 9-0 to reconsider 2009-122 and voted 9-0 to circulate it with 2010-014.

b. 1986-072 (King Eider at Morro Bay, SLO) – Curtis Marantz requested this record be discussed and provided a new end date for this bird. The accepted date span was 28 Oct 1985-28 Feb 1986. The correct end date, per Marantz and Tom Edell, is 17 Feb 1986, which the Committee voted to accept.

c. 2009-016, -017, -018 (Dark-rumped Petrel records from NOAA survey) – Johnson sought guidance for handling presumably valid records from highly experienced seabirders obtained during NOAA surveys that are often poorly documented.

d. 2009-131 (Stejneger’s Petrel record from NOAA survey) – same concerns from Johnson as 19b.

e. Blue-footed Booby records from the Salton Sea during Fall 2009 – Two dead birds documented from the the south end of the Salton Sea provoked debate over whether or not these birds were one of the live birds documented earlier. One, an adult with a blue face, was considered a different bird because of its age, while the other, an immature, was recognized as possibly being one of the immatures previously seen alive, but the Committee agreed it should be treated as a separate record and this possibility mentioned in an annual report.

f. 2009-112?? And 2010-042 (Yellow-crowned Night-Herons at SD River mouth/Famosa Slough, SD) – A discrepancy in the actual number of individuals present in 2009 became evident in 2010 when additional photo documentation surfaced. Two individuals at this site were accepted from 2009, but supplemental photographs reviewed by two members showed evidence of three. The photographs are not available (yet?) so further effort will be made to acquire these, at which point the 2009 record will be brought to the 2012 meeting.

g. Black Vulture – Johnson reviewed the three accepted records from SBA and VEN and concluded more than one bird was involved. Photographs from these records as well as from two more recent records (Goleta 2010 and Buellton 2011) will be reviewed by Johnson and Sullivan and they will make a report to the Committee recommending a course of action.

h. 2007-044, 2008-085, 2010-013 (Harris’s Hawk near Dripping Springs, RIV Aguanga/Warner Springs SD) – A Dunn motion (Lehman second) to consider these records as pertaining to the same individual passed 8-1.

i. 2010-030 and 2010-033 (Wilson’s Plover at Santa Margarita R mouth SD and Bolsa Chica OR same bird issue) – Tietz questioned why these two records were not the same individual and a discussion of different voting philosophies ensued. The consensus of the Committee was these records involve “possibly the same” bird.

j. 2008-193 (Blue-headed Vireo at Arroyo Grande Creek, SLO on 30 Sep 1997) – Based on concerns about identification problems with the Solitary Vireo complex, Morlan made a motion to recirculate this record for a third round; Dunn seconded. The motion passed 9-0 so the record will recirculate.

20. Records without a decision after third circulation:

The following records have considerable support. Various members presented a summary each record to the Committee:

2008-199 Yellow-billed Loon, O'Neil Forebay MER

2008-126 Red-footed Booby, San Diego Bay SD

2009-041 Glossy Ibis, 2 Sep 2008 Sutter County

2008-085 Harris's Hawk, Aguanga/Warner Springs SD

2008-080 Crested Caracara, Santa Barbara SBA

2009-043 American Golden-Plover, Goose Lake MOD

2008-208 Lesser Black-backed Gull, NESS RIV

2008-191 Blue-headed Vireo, Arroyo Grande Creek SLO

2009-059 Blue-headed Vireo, Point Loma SD

21. Annual report:

a. 35th report by Pyle and Tietz. Review comments due by 31 January 2011. Discussion on new tabular format.

b. The 36th report authors will be Sullivan and Johnson.

22. Closing:

a. The 2012 meeting will be held on 13-14 January 2012 at H.T. Harvey and Associates in Los Gatos.

b. Appreciations:

Linnea Hall and staff, and WFVZ for ongoing support and archiving records.

Paul Collins, Krista Fahy, Meridith Moore, and the Santa Barbara Museum of Natural History for hosting our meeting.

Dave Compton for logistical support.

Joe Morlan for website work.

Dunn, Sullivan and Tietz for time served.

Peter Pyle and Jim Tietz for their work on the 35th report.

Joe Morlan and Jim Tietz for maintaining online updates to the CBRC book.

Guy McCaskie for his boundless energy and dedication to his job as Secretary.

c. Adjournment

5:05 pm, 15 January 2011

– Dan Singer, Vice-Chair

Approved 9 March 2011

APPENDIX A

Fulvous Whistling-Duck:

See pages 10-11 of the CBRC Annual Meeting Minutes for 27-28 January 2006.

APPENDIX B Tufted Duck 10-Year Analysis

	Location	Fall-Winter-Spring	Comments	Totals
Year 1	San Rafael, MRN	1 Apr 2010	female	1
